NEOFORCE ANNOUNCES NEW CUSTOMIZED TRANSPORT INCUBATOR SOLUTION

IVYLAND, PA USA: TUESDAY, MARCH 06, 2007. NeoForce has created a new innovative approach to utilize many of the components currently owned by hospitals to update aging infant transport fleets. “Many hospitals already have a number of the components they need to create an effective transport solution such as monitors and ventilators”, stated Otho Boone, President of NeoForce Group.

Creation of an innovative “space cage” design will allow users to update the transport incubator to include the new Atom Medical V-808 Transcapsule® and then mount existing IV pumps, ventilators and monitors. “We can walk customers through a 4 step customization process that will allow them to have a transport solution tailored to their needs at a fraction of the cost of a new system”, continued Boone. In the end it is all about value and giving the customer exactly what they need, when they need it. The flexibility of this offering and the expertise of several companies in the transport business all working together will serve customers well and give transport teams another more economical choice.
